# Basic Addition Facts

## More Addition Facts

Can you state a generalization?

## Still More Addition Facts

$$\square_{\text{purple}} + \square_{\text{orange}} =$$

$$\square_{\text{green}} + \square_{\text{orange}} =$$

$$\square_{\text{purple}} + \square_{\text{green}} =$$

Can you state a generalization?

Choose two blocks at random and find their sum.  
Repeat several times.

Choose three blocks at random and find their sum.  
Repeat several times.

Choose a large handful of blocks and simplify.

Suggestions for how to simplify?

Make an addition table for the Al-Jabar blocks.

What about subtraction?

Subtraction can be "take away" or "missing addend."

Think of  $9-4$ . This equals some number  $x$  such that  $x+4=9$ . That number must be 5.

Think of

$$\begin{array}{l} \square - \square = \underline{\quad} \\ \underline{\quad} + \square = \square \end{array}$$

$$\begin{array}{l} \square - \square = \underline{\quad} \\ \underline{\quad} + \square = \square \end{array}$$

## The Game:

Goal is to get rid of the pieces in your hand as quickly as possible by exchanging pieces from your hand with pieces from a center pile.

Each player has a "hand" of pieces and there is a center pile. On a turn, you can exchange up to 3 pieces from your hand for up to 3 pieces from the center.

To begin, place a black piece and a randomly drawn colored piece in the center.

Player to the left of the dealer takes a turn, exchanging up to 3 pieces. If the player has more than 3 pieces in their hand and cannot make an exchange, draw from the bag until an exchange can be made.

### Additional Rules:

1.  +  +  +  = 
2. If, at the end of a turn, there are doubles in the center, these are exchanged for black pieces. In addition, all other players add the appropriate number of black pieces to their hands.
  - a. Do not cancel pairs of blacks from the center.
  - b. Exchanging pairs from your hand for a black does NOT add blacks to other players' hands.
